PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in SQL, Python, Power BI, Excel, and Business Intelligence. Proven ability to conduct full lifecycle data analysis—from collection and validation to transformation and reporting—while developing interactive dashboards and generating actionable insights. Strong foundation in statistical analysis, machine learning, and database management with a Master's degree in IT Management (GPA 3.48). Adept at translating complex datasets into clear, data-driven recommendations that support business growth.

WORK EXPERIENCE

Community Dreams Foundation | Data Analyst (Volunteer)

Remote | Jun 2025 – Present

- Conducted full lifecycle data analysis including data collection, validation, transformation, and reporting to support organizational decision-making initiatives.
- Developed analytical reports and interactive dashboards using Excel, SQL, Tableau, and Power BI, applying data visualization best practices to improve stakeholder visibility into key operational performance metrics.
- Analyzed large datasets using Python and SQL to identify trends, patterns, and business opportunities, enabling data-driven strategy and process improvements.
- Performed data cleansing and quality assurance activities to improve accuracy and consistency across reporting systems.
- Collaborated with cross-functional stakeholders to gather business requirements and prioritize analytics deliverables.
- Maintained relational databases and data collection systems while optimizing data processing workflows for efficiency.
- Generated recurring performance reports and presented actionable insights to management, supporting organizational goals.

Develop Trees | Data Analyst

Guntur, India | Jun 2022 – Jun 2023

- Wrote and optimized SQL queries and used Python and R to extract, transform, and analyze business data, supporting operational decision-making.
- Designed and developed interactive dashboards using Tableau and Power BI to visualize key business metrics and performance trends for stakeholders.
- Performed data analysis to identify patterns, trends, and insights that guided business strategy and process improvements.
- Built and maintained responsive web pages using HTML and CSS to support internal business applications and reporting portals.
- Collaborated with cross-functional teams to gather requirements and deliver data-driven solutions aligned with business goals.

WorksBot | Software Developer Intern

Remote | Jan 2022 – Jun 2022

Project: Academic Management System

- Developed a web-based academic management platform using Django, HTML, CSS, and MongoDB, improving student record accessibility and administrative efficiency.
- Designed and implemented Admin and Student portals to manage academic records, attendance, fee payments, and real-time notifications.
- Built database-driven modules to streamline student information management, data reporting, and profile management workflows.
- Collaborated with team members on application testing, debugging, and deployment, ensuring reliable system performance.

ACADEMIC PROJECTS

Power BI Sales Analytics Dashboard

- Developed interactive dashboards using Power BI to analyze sales performance, customer behavior, and product metrics, enabling real-time business monitoring.
- Created KPI reports, trend analysis visualizations, and revenue forecasting models using data transformation and DAX modeling techniques.

Social Media Analytics & Customer Engagement Analysis

- Analyzed website traffic and digital campaign performance using Google Analytics and SimilarWeb, extracting engagement and sentiment insights.
- Delivered data-driven marketing recommendations that improved campaign effectiveness, audience targeting, and overall reach.

Blockchain-Based Secure Medical Data Sharing System

Academic Group Project — Software Engineering | Florida Atlantic University

- Collaborated in a group to design and develop a blockchain-powered web application using Django and Python, enabling secure, role-based access to medical records for authorized doctors and patients only.
- Implemented smart contract logic and role-based access control (RBAC) to enforce strict data access policies, ensuring only selected individuals can view sensitive medical records.
- Built the Django backend, frontend interface (HTML, CSS), and contributed to blockchain integration to deliver a fully functional, tamper-proof medical data sharing platform.
- Designed a decentralized data architecture eliminating single points of failure and enhancing data security, integrity, and patient privacy compliance.

Technologies: Python, Django, Blockchain, Smart Contracts, HTML, CSS, Git

Medical AI Assistant using Snowflake Cortex AI (Personal Project – In Progress)

- Designed and developed an AI-powered Medical Assistant using Snowflake Cortex AI, Snowflake SQL, Python, FastAPI, and React.
- Built a conversational interface that answers healthcare-related questions using Snowflake Cortex LLM capabilities.
- Developed secure REST APIs with FastAPI to connect the frontend with Snowflake Cortex AI services.
- Loaded and queried structured medical datasets in Snowflake to support AI-assisted responses.
- Implemented prompt engineering techniques to improve response quality and contextual accuracy.
- Integrated Snowflake SQL and Cortex AI functions to generate intelligent, data-driven insights.
- Designed scalable data models and optimized SQL queries for efficient retrieval.
- Built an interactive, responsive web interface for real-time AI conversations.
- Version controlled the application using Git and documented the architecture on GitHub.

Technologies: Snowflake Cortex AI, Snowflake SQL, Python, FastAPI, React, Git, REST APIs, SQL

EDUCATION

Florida Atlantic University

Boca Raton, FL | May 2025

Master of Science in Information Technology Management | GPA: 3.48 / 4.0

Relevant Coursework: Data Science, Big Data Analytics, Artificial Intelligence, Machine Learning, Algorithms, IoT, Web Analytics, Social Media Analytics

TECHNICAL SKILLS

Programming Languages: Python, SQL, R, Java, C, C++, HTML, CSS

Data Analytics & BI Tools: Power BI, Tableau, Microsoft Excel, Google Analytics, SimilarWeb

Data Science & ML: Statistical Analysis, Regression, Classification, Clustering, Forecasting, Feature Engineering, Scikit-Learn, TensorFlow

Databases: MySQL, MongoDB, SQL Server, Snowflake

Big Data Technologies: MapReduce, Data Warehousing

Development Tools: Git, Jupyter Notebook, VS Code, FastAPI

Operating Systems: Windows, Linux, Unix, macOS

CERTIFICATIONS

- Artificial Intelligence, Machine Learning & Data Science – IIDT (2023)
- TCS iON Career Edge – Young Professional (2023)
- Web Development Using ReactJS – APSSDC (2022)
- Python Programming Workshop – APSSDC (2021)
